Executive Summary

The Preliminary Biennial RCRA Hazardous Waste Report (Based on 1995 Data)

This page intentionally left blank.

EXECUTIVE SUMMARY

The United States Environmental Protection Agency (EPA), in cooperation with the States,[1] biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The purpose of this preliminary report is to communicate the initial findings of EPA's 1995 Biennial Reporting System (BRS) data collection efforts to the public, government agencies, and the regulated community, as well as to allow an assessment of the quality and completeness of the data submissions on which the report is based.[2] (For a further discussion of data quality and completeness see page ES-11.) The preliminary report consists of five documents (a "State Summary Analysis" will be included in the final report):

- Executive Summary--an overview of national hazardous waste generation and management practices;
- National Analysis--a detailed look at waste handling practices in the EPA Regions, the States and at the largest facilities in the nation, including quantities of generation, management, shipments and receipts, and interstate imports and exports, as well as counts of generators and managers;
- State Detail Analysis--a detailed look at each State's waste handling practices, including overall totals for generation, management, and shipments and receipts, as well as totals for the largest fifty facilities;
- List of Large Quantity Generators--identifies every hazardous waste generator in the United States that reported itself to be a large quantity generator in 1995; and
- List of Treatment, Storage and Disposal Facilities--identifies every hazardous waste manager in the United States that reported itself to be a treatment, storage or disposal facility in 1995.

[1]The term "State" includes the District of Columbia, Puerto Rico, Guam, the Navajo Nation, the Trust Territories, and the Virgin Islands, in addition to the 50 United States.

[2]While BRS respondents have submitted Confidential Business Information (CBI) pursuant to 40 CFR 260.2(b), none of these data have been included in this preliminary report.

RCRA HAZARDOUS WASTE

Throughout this report, the term RCRA hazardous waste refers to solid waste assigned a federal hazardous waste code and regulated by RCRA, either because it was managed in a unit subject to RCRA permitting standards or because it was shipped and subject to RCRA transportation requirements. Individual States may choose to regulate additional wastes not identified as hazardous by EPA. Hazardous wastes assigned only a State hazardous waste code are not included in this report. Similarly, hazardous wastes managed only in units subject to State permitting standards, or wastes that are managed only in units exempt from RCRA permitting standards, are not included in this report.

RCRA HAZARDOUS WASTE GENERATION

RCRA hazardous waste generation information is obtained from data reported by RCRA large quantity generators (LQG). The RCRA hazardous waste generation quantities in this report are limited to generation quantities that are managed in units subject to RCRA permitting standards. All hazardous waste generation reported to be managed on-site in units exempt from RCRA permitting standards, such as treatment systems permitted by the National Pollutant Discharge Elimination System (NPDES), is excluded from the RCRA generation quantities provided in this report. Although some off-site shipments may ultimately be managed in units exempt from RCRA permitting standards, this determination cannot be made from information reported by the generator. Therefore, all hazardous waste generation shipped off-site is included in the RCRA generation quantities provided in this report.

Hazardous waste generators are included in this report if they identified themselves as a LQG. It is important to note that the LQGs identified in this report have been included on the basis of the best available and most current information provided electronically to the EPA by the States. Both the EPA and the States have made significant efforts to ensure the accuracy of these data. However, the LQG counts may include some generators that, when determining whether they were LQGs, used a lower State-defined threshold for LQGs, counted wastes regulated only by their States, or counted wastes that are exempt from federal regulation.

A generator was defined as a federal large quantity generator in 1995 if it met or exceeded any one of the following federal criteria:

- The generator generated in any single month 1,000 kg (2,200 lbs or 1.1 tons) or more of RCRA hazardous waste; or
- The generator generated in any single month, or accumulated at any time, 1 kg (2.2 lbs) of RCRA acute hazardous waste; or
- The generator generated, or accumulated, at any time more than 100 kg (220 lbs) of spill cleanup material contaminated with RCRA acute hazardous waste.

In 1995, 19,908 LQGs produced 279 million tons of hazardous waste regulated by RCRA. This is a decrease of 4,454 LQGs and an increase of 21 million tons of waste compared to 1993. As identified in Exhibit 1 the five (5) States whose LQGs generated the largest amount of hazardous waste were Texas (145 million tons), Tennessee (39 million tons), California (17 million tons), Louisiana (15 million tons), and Illinois (14 million tons). Together, the LQGs in these States accounted for 82% of the national total waste generated.

Wastewater generation is identified in BRS by the use of certain form codes or by waste management in units typically associated with wastewater management (i.e., management in aqueous treatment units, neutralization tanks, underground injection wells, or other wastewater management systems). See Chapter 1, Waste Generation, of the National Analysis for a list of which form codes and system type codes are used to identify wastewater. (A complete list of system type codes can be found in Appendix A of the National Analysis, and a complete list of form codes can be found in Appendix B of the National Analysis.) In 1995, wastewater generation accounted for 96% of the national generation total, while in 1993 wastewater generation accounted for 92% percent of the national generation total.

Overall, total hazardous waste generation increased from 258 million tons in 1993 to 279 million tons in 1995. Wastewater generation also increased from 237 million tons in 1993 to 267 million tons in 1995. In contrast, non-wastewater generation decreased from 22 million tons in 1993 to 13 million tons in 1995.

In comparing 1995 data with those of earlier reports, it is important to note that many new wastes were captured by RCRA in 1990 with the promulgation of the Toxicity Characteristic (TC) Rule. The TC Rule added 25 new hazardous waste codes (D018 to D043) and required more stringent analytical tests for the presence of toxic constituents in waste. For 1995, these codes captured, at a minimum, 76 million tons of wastes not regulated before 1990. An additional 37 million tons were described by D018 to D043 when mixed with other waste codes. This suggests that, in 1995, the new toxicity characteristic wastes captured as much as 113 million tons of wastes not regulated before 1990. In contrast, the 1993 data reported as much as 135 million tons of waste not regulated before 1990.

RCRA HAZARDOUS WASTE MANAGEMENT

RCRA hazardous waste management information is obtained from data reported by RCRA treatment, storage, or disposal facilities (TSD). The RCRA hazardous waste management quantities in this report are limited to waste that was received or generated by a reporting TSD and managed at the reporting TSD in treatment units subject to RCRA permitting standards. All hazardous waste either received for transfer shipment or managed at a reporting TSD in units exempt from RCRA permitting standards, such as treatment systems permitted by the National Pollutant Discharge Elimination System (NPDES), is excluded from the RCRA management quantities provided in this report.

In 1995, 1,787 TSDs subject to RCRA permitting standards managed 277 million tons of hazardous waste. This represents a 797 facility decrease in the number of TSDs and a 42 million ton increase in the amount of waste managed as compared to 1993. As identified in Exhibit 2 the five (5) States whose TSDs managed the largest quantities of hazardous wastes were Texas (165 million tons), Tennessee (39 million tons), California (16 million tons), Louisiana (14 million tons), and Michigan (14 million tons). Together, the TSDs in these States accounted for 89% of the national total waste managed.

Wastewater management is identified in BRS by the use of certain form codes or by waste management in units typically associated with wastewater management (i.e., management in aqueous treatment units, neutralization tanks, underground injection wells, or other wastewater management systems). See Chapter 2, Waste Management, of the National Analysis for a list of which form codes and system type codes are used to identify

wastewater. (A complete list of system type codes can be found in Appendix A of the National Analysis, and a complete list of form codes can be found in Appendix B of the National Analysis.) In 1995, wastewater management accounted for 97% of the national management total, while in 1993 wastewater management accounted for 94% of the national management total.

Overall, total hazardous waste management increased from 235 million tons in 1993 to 277 million tons in 1995. Wastewater management also increased from 220 million tons in 1993 to 270 million tons in 1995. In contrast, non-wastewater management decreased from 14 million tons in 1993 to 7.8 million tons in 1995.

The majority (53%) of the waste managed in the nation was managed in aqueous treatment units. Aqueous treatment units consist of:

Aqueous organic treatment units	114 million tons
Aqueous organic and inorganic treatment units	24 million tons
Aqueous inorganic treatment units	8 million tons

Land disposal accounted for 8.1% of the national management total. Land Disposal units include:

Deepwell/Underground Injection	21 million tons
Landfill	1 million tons
Surface Impoundment	575 thousand tons
Land Treatment/Application/Farming	10 thousand tons

Thermal treatment accounted for 2.1% of the national management total. Thermal treatment units are:

Incineration	4 million tons
Energy Recovery (Reuse as Fuel)	1 million tons

Recovery operations accounted for 0.7% of the national management total. Recovery operations include:

Fuel Blending	657 thousand tons
Metals Recovery (for Reuse)	528 thousand tons
Other Recovery	515 thousand tons
Solvents Recovery	285 thousand tons

The remaining management quantities (36.1%) were from "Other" treatment and disposal units:

Other Treatment	97 million tons
Other Disposal (specified in comments)	2 million tons
Stabilization	830 thousand tons
Sludge treatment	591 thousand tons

RCRA HAZARDOUS WASTE SHIPMENTS AND RECEIPTS

RCRA hazardous waste shipment information is obtained from data reported by both RCRA large quantity generators (LQG) and RCRA treatment, storage, or disposal facilities (TSD). RCRA hazardous waste shipment quantities include all RCRA waste shipments reported by RCRA LQGs and TSDs. Although some off-site shipments may ultimately be managed in treatment units exempt from RCRA permitting standards, this determination cannot be made from information reported by the shipper. Therefore, the shipment quantities provided in this report may include some waste that is ultimately managed in units exempt from RCRA permitting standards. In some instances, reported waste shipments are actually the movement of wastes across contiguous physical locations that are regulated under different EPA identification numbers. These waste transfers are correctly reported as shipments and cannot be distinguished from transport shipments based on the information reported.

RCRA hazardous waste receipt information is obtained from data reported by RCRA TSDs. RCRA hazardous waste receipt quantities are limited to waste reported by a receiving TSD as either received for transfer or received and managed at the reporting TSD in units subject to RCRA permitting standards. Received wastes managed at the reporting

TSD in units exempt from RCRA permitting standards, such as treatment systems permitted by the National Pollutant Discharge Elimination System (NPDES), are excluded from receipt quantities provided in this report.

Limitations in the reported information prevents the direct comparison of shipment and receipt quantities. Hazardous waste shipment quantities may include hazardous waste shipments that are ultimately managed by the receiver in units exempt from RCRA permitting standards. Hazardous waste receipt quantities exclude waste managed in units exempt from RCRA permitting standards. Therefore, hazardous waste shipment quantities can be expected to exceed hazardous waste receipt quantities because exempt waste may be included in shipment quantities and excluded from receipt quantities. Exempt waste reporting will be eliminated beginning with the 1997 biennial reporting cycle. This change should mitigate this discrepancy in future reports.

RCRA hazardous waste exports are waste shipments where the destination is a different State from where the waste was generated. Exports are calculated from information provided by waste shippers. RCRA hazardous waste imports are waste receipts where the waste originated in another State. RCRA hazardous waste imports are calculated from information provided by RCRA TSDs.

In 1995, 19,567 shippers reported shipping a total of 16 million tons of hazardous waste. This is a decrease of 4,397 shippers and a decrease of 2 million tons of hazardous waste compared to 1993. The States whose shippers reported shipping (in or out of State) the largest quantities of waste were Texas (2.4 million tons), Minnesota (2.1 million tons), New York (2.0 million tons), Illinois (1.9 million tons), and California (1.7 million tons). Together the shippers in these States accounted for 65% of the total quantity of hazardous waste shipped nationwide.

Nationwide, of the 16 million tons of hazardous waste shipped, 8.9 million tons were **exported** to other States. This is a 2.2 million ton increase compared with 1993. The States whose shippers reported exporting the largest amount of waste were Minnesota (2.1 million tons), Illinois (1.7 million tons), and California (1.2 million tons). Together the shippers in these States accounted for 57% of the national total of hazardous waste exports.

In 1995, 522 RCRA TSDs reported receiving 6.2 million tons of hazardous waste. This is a decrease of 217 TSDs and a decrease of 2.8 million tons of hazardous waste compared with 1993. The States whose receivers reported receiving the largest quantities of waste, from both in or out of State, were Texas (980 thousand tons), Indiana (580 thousand tons), Michigan (510 thousand tons), and California (480 thousand tons). Together, the receivers in these States accounted for 42% of the national total of waste receipts.

Nationwide, of the 6.2 million tons of hazardous waste receipts, 3.4 million tons were **imported** from other States. This is a decrease of 820 thousand tons compared with 1993. The States whose receivers reported importing the largest amount of waste were Texas (630 thousand tons), Indiana (260 thousand tons), Michigan (260 thousand tons), Pennsylvania (220 thousand tons), and Louisiana (210 thousand tons). Together the receivers in these States accounted for 46% of the national total of waste imports.

Note: Columns may not sum due to rounding.

The data presented in this report have been provided by States to their respective EPA Regional offices. In some cases the data were also collected by EPA Regional offices. When

provided an indication of how complete the data were for each State that was being transmitted. Exhibit 3 lists the current level of completion for each State according to one of the two

1. State believes data submission is complete.

   required to file the 1995 Biennial Report, including all LQGs and TSDs in the State. (Please note that sites claiming confidential business information have been excluded

2. State believes data submission is incomplete.

   1995 Biennial Report. Data for these States will probably change when a complete submission is received for the State.

All volumes of *The Preliminary Biennial RCRA Hazardous Waste Report (Based on 1995 Data)*, as well as the 1995 Preliminary Biennial Reporting System (BRS) database, can be obtained via the Internet at: “http://www.epa.gov/epaoswer/hazwaste/data/” or they can be purchased from the National Technical Information Service (NTIS) at (703) 487-4650.

National Analysis

The Preliminary Biennial RCRA Hazardous Waste Report (Based on 1995 Data)

This page intentionally left blank.

National Biennial RCRA Hazardous Waste Report

The United States Environmental Protection Agency (EPA), in cooperation with individual States,[1] biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The purpose of this report is to communicate the initial findings of EPA's 1995 Biennial Reporting System (BRS) data collection efforts to the public, government agencies, and the regulated community, as well as to allow an assessment of the quality and completeness of the data submissions on which the report is based.[2] (For further discussion of data quality and completeness, see Appendix E.)

1.0 WASTE GENERATION

This section presents a series of exhibits describing RCRA hazardous waste generation in 1995. For a complete description of what is included in this report, please see the Executive Summary sections "RCRA Hazardous Waste" and "RCRA Hazardous Waste Generation."

Nationwide, 19,908 large quantity generators (LQG) produced 279 million tons[3] of hazardous wastes regulated by RCRA. This represents a decrease of 4,454 LQGs and an increase of 21 million tons of hazardous waste compared to 1993. Exhibits 1.1, 1.2, and 1.3 present the quantity of RCRA hazardous waste generated and number of LQGs in each EPA Region in 1995[4]. LQGs located in three Regions produced 85% of the 279 million tons generated nationwide. LQGs in Region 6 generated 162 million tons, LQGs in Region 4 generated 44 million tons, and LQGs in Region 5 generated 31 million tons. The EPA Regions with the largest numbers of LQGs were Region 5 (4,535), Region 4 (3,139), and Region 2 (2,996). The LQGs in these three (3) Regions accounted for 54% of the total number of LQGs.

[1]The term "State" includes the District of Columbia, Puerto Rico, Guam, the Navajo Nation, the Trust Territories, and the Virgin Islands.

[2]While BRS respondents have submitted confidential business information (CBI) pursuant to 40 CFR 260.2(b), none of these data have been included in this preliminary report.

[3]1 Ton = 2,000 pounds.

[4]See Appendix C for information on which States are in each EPA Region.

Exhibit 1.1 **Number and Percentage of RCRA Hazardous Waste Generators and Total RCRA Hazardous Waste Quantity Generated, by EPA Region, 1995**

EPA REGION	HAZARDOUS WASTE QUANTITY		LARGE QUANTITY GENERATORS	
	TONS GENERATED	PERCENTAGE	NUMBER	PERCENTAGE
1	999,813	0.4	1,328	6.7
2	3,890,625	1.4	2,996	15.0
3	10,621,479	3.8	1,869	9.4
4	44,267,044	15.9	3,139	15.8
5	30,558,533	10.9	4,535	22.8
6	161,533,667	57.9	2,072	10.4

1	1,328	6.7	999,813	0.4
10	1,058	5.3	4,532,437	1.6
7	565	2.8	1,885,938	0.7
8	354	1.8	3,088,899	1.1
TOTAL	**19,908**	**100.0**	**279,088,670**	**100.0**

Note: Columns may not sum due to rounding.

The LQGs in Region 6 generated the largest amount of hazardous waste (162 million tons or 58%) while the Region ranked fourth in number of LQGs (2,072). Region 5 had the highest number of LQGs (4,535), and the LQGs in Region 5 ranked third in the amount of hazardous waste generated (31 million tons or 11%). Region 8 had the smallest number of LQGs (354), and the LQGs in Region 1 generated the least amount of hazardous waste (1.0 million tons).

As shown in Exhibits 1.4, 1.5, and 1.6, the five (5) States whose LQGs generated the largest amount of hazardous waste were Texas (145 million tons), Tennessee (39 million tons), California (17 million tons), Louisiana (15 million tons), and Illinois (14 million tons). Together, the LQGs in these States accounted for 82% of the national total quantity generated.

The States with the most LQGs were New York (1,878), California (1,635), Ohio (1,354), Texas (1,297), and Illinois (1,151). The LQGs in these States accounted for 37% of the total number of LQGs.

As shown in Exhibit 1.7, the largest 50 generators nationwide account for 87% (243 million tons) of the national total. Large generators within the five (5) largest States (Texas, Tennessee, California, Louisiana, and Illinois) accounted for the majority of the States' generation totals. Of the 50 generators, 23 are located in Texas. These 23 generators accounted for 96% of Texas' total hazardous waste generation. One (1) Tennessee site, Tennessee Eastman Co., accounted for 99% of Tennessee's total. Three (3) generators in California accounted for 86% of the State's total. In Louisiana, seven (7) generators accounted for 79% of the State's total. Finally, four (4) generators accounted for 82% of Illinois' total.

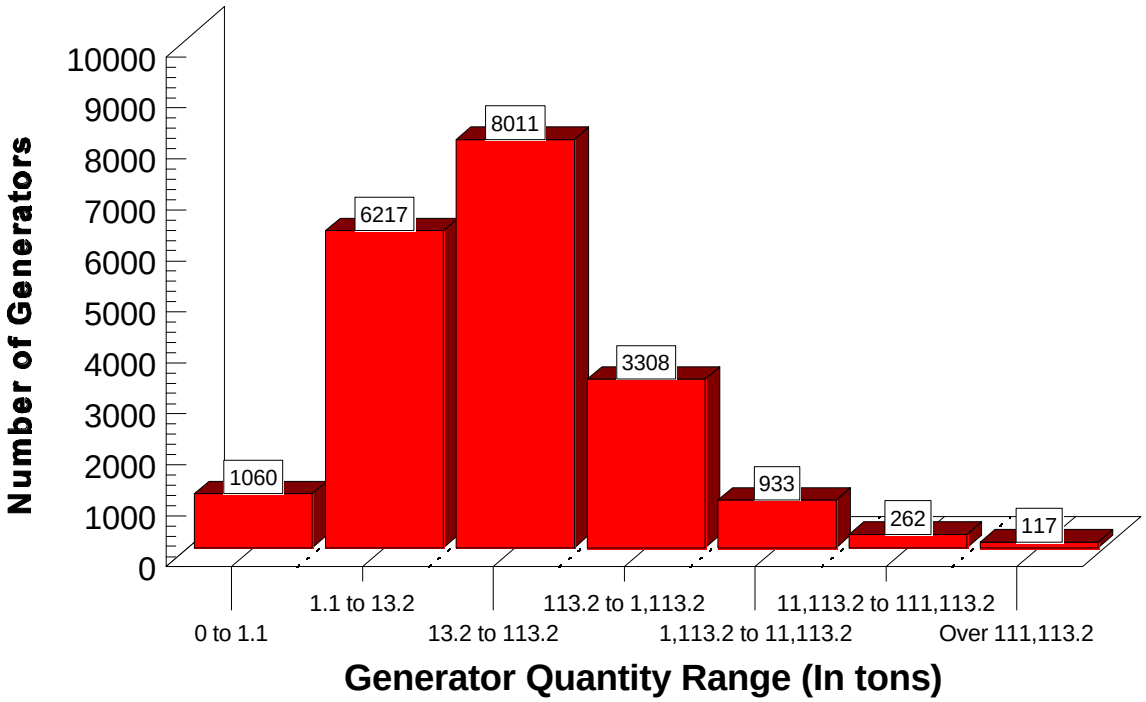
Exhibit 1.8 Number of Large Quantity Generators by Generator Quantity Range, 1995



As shown in Exhibit 1.8, in 1995 there were 12,631 generators that generated more than 13.2 tons, 6,217 generators that generated between 1.1 and 13.2 tons, and 1,060 generators that generated less than 1.1 tons. Forty percent (40%) of the LQGs (8,011) generated between 13.2 and 113.2 tons, which is the range displayed in Exhibit 1.8 with the highest distribution. The range with the second highest distribution is that between 1.1 and 13.2 tons, with 6,217 generators. Together, these two ranges account for 71% of the total number of LQGs. Although most LQGs generate between 13.2 and 113.2 tons, the fifty largest RCRA hazardous waste generators, listed in Exhibit 1.7, all generate over 111,113.2 tons.

Nationwide, wastewater generation accounted for 96% of the national generation total, while in 1993 wastewater generation accounted for 92% of the national generation total.[1] Exhibit 1.9 presents the quantities of non-wastewater and wastewater generation and their respective percentages, by State. The five (5) States whose LQGs generated the largest amount of hazardous wastewater were Texas (143 million tons), Tennessee (38 million tons), California (17 million tons), Louisiana (15 million tons), and Michigan (12 million tons). The five (5) States whose LQGs generated the largest amount of hazardous non-wastewater were Illinois (3.4 million tons), Texas (1.9 million tons), Louisiana (570 thousand tons), Michigan (530 thousand tons), and Idaho (510 thousand tons).

Most of the waste generated is wastewater, and most of the wastewater is generated by a relatively small number of generators. Exhibit 1.10 shows the 50 largest wastewater generators in the United States. Many of the LQGs in Exhibit 1.10 are also listed in Exhibit 1.7. The wastewater generated by the 50 largest wastewater generators (241 million tons) accounted for 90% of the national total for wastewater generation and 86% of the total national hazardous waste generation.

Overall, total hazardous waste generation increased from 258 million tons in 1993 to 279 million tons in 1995. Wastewater generation also increased from 237 million tons in 1993 to 267 million tons in 1995. In contrast, non-wastewater generation decreased from 22 million tons in 1993 to 13 million tons in 1995.

[1] A waste is considered wastewater if the BRS form code is B101, B102, B105, or B110-116, or the BRS system type code is M071-079, M081-085, M089, M091-094, M099, M121-125, M129, or M134-136. See Appendix A for further information on BRS System Type Codes and Appendix B for further information on BRS Form Codes.

Hazardous waste is distinguished according to its designation as a characteristic or listed waste. Characteristic and listed wastes are specifically described in 40 CFR[1] 261, and a list of waste codes is provided as Appendix D of this report.

The term "characteristic waste" refers to any solid waste that exhibits the characteristic of ignitability (D001), corrosivity (D002), reactivity (D003), or that contains toxic constituents in excess of federal standards (D004 to D043).

An ignitable waste is a solid waste that exhibits any of the following properties:

- A liquid, except aqueous solutions containing less than 24 percent alcohol, with a flash point less than 60 degrees Celsius (140 degrees Fahrenheit).
- A nonliquid capable, under normal conditions, of spontaneous and sustained combustion.
- An ignitable compressed gas as defined by Department of Transportation (DOT) regulations.
- An oxidizer per DOT regulations.

A corrosive waste is a solid waste that exhibits the following properties:

- An aqueous material with pH less than or equal to 2 or greater than or equal to 12.5.
- A liquid that corrodes steel at a rate greater than 1/4 inch per year at a temperature of 55 degrees Celsius (130 degrees Fahrenheit).

A reactive waste is a solid waste that exhibits the following properties:

- Normally unstable and reacts violently without detonating.
- Reacts violently with water.
- Forms an explosive mixture with water.
- Contains cyanide or sulfide and generates toxic gases, vapors, or fumes at a pH of between 2 and 12.5.

[1]Code of Federal Regulations.

- o Capable of detonation if heated under confinement or subjected to strong initiating source.
- o Capable of detonation at standard temperature and pressure.
- o Listed by DOT as Class A or B explosive.

Wastes with the toxicity characteristic are identified through failure of the Toxicity Characteristic Leaching Procedure Test (TCLP). A solid waste exhibits the toxicity characteristic if, using the TCLP or an equivalent method, the extract from a representative sample of the waste contains any of the contaminants D004 to D043 at a concentration equal to or greater than the value described in 40 CFR 261.24.

The term "listed waste" (F, K, P, and U codes) refers to waste that EPA has identified as hazardous as a result of its investigations of particular industries or because EPA has specifically recognized a commercial chemical waste's toxicity. A solid waste is a "listed" hazardous waste if it is named on one of three lists developed by EPA:

1) Non-specific source wastes ('F' wastes)--These are generic wastes, commonly produced by manufacturing and industrial processes. Examples from this list include spent halogenated solvents used in degreasing and wastewater treatment sludge from electroplating processes as well as dioxin wastes, most of which are acutely hazardous wastes due to the danger they present to human health and the environment.

2) Specific source wastes ('K' wastes)--This list consists of wastes from specifically identified industries such as wood preserving, petroleum refining, and organic chemical manufacturing. These wastes typically include sludges, still bottoms, wastewaters, spent catalysts, and residues, (e.g., wastewater treatment sludge from pigment production).

3) Commercial chemical products ('P' and 'U' wastes)--The third list consists of specific commercial chemical products, or manufacturing chemical intermediates. This list includes chemicals such as chloroform and creosote, acids such as sulfuric acid and hydrochloric acid, and pesticides such as DDT and kepone. The 'U' wastes include toxic chemicals while 'P' waste listings are reserved for acutely toxic chemicals.

Exhibit 1.11, 1.12, and 1.13 show the portions of the national generation total of 279 million tons that were characteristic, listed, or a mixture of characteristic and listed wastes. Characteristic wastes account for 66% (185 million tons) of the national total, listed wastes account for 23% (64 million tons), and mixtures of the two account for 11% (30 million tons). Listed only waste has increased 14% since 1993, and wastes described as characteristic only have increased by 3.5%. However, wastes that are mixtures of characteristic and listed wastes have decreased by almost 18%.

It is important to note changes with respect to the wastes that were newly regulated by the Toxicity Characteristic (TC) Rule promulgated in 1990. As shown in Exhibit 1.12, 76 million tons of waste were identified by these 25 new waste codes (D018 to D043), indicating that, at a minimum, the TC Rule captured 76 million tons of wastes not regulated prior to 1991. Exhibit 1.13 shows an additional 20 million tons of waste described by D018 to D043 and other characteristic codes. Another 16 million tons were described by D018 to D043 and other listed waste codes. While it is not possible to calculate exactly the amount of waste newly regulated by the TC Rule and the amount regulated prior to 1990, as much as 113 million tons may have been captured in 1995 by new toxicity characteristic waste listings. In contrast, the 1993 data reported as much as 135 million tons of waste not regulated before 1990.

In conclusion, the amount of hazardous waste generated in 1995 was between 166 and 203 million tons without these newly regulated TC wastes. This compares to a total of 198 million tons generated in 1989 before promulgation of the TC Rule.

[1] Listed wastes with ignitable, corrosive, reactive, D004-17(Toxic), or D018-43(Toxic) characteristics respectively may have other characteristics as well. Similarly, characteristic wastes that are also F, K, P, or U listed wastes respectively may be other listed wastes as well.

Note: All quantities are in tons.
Columns do not sum to total because wastes may be included in more than one category.

This page intentionally left blank.

2.0 WASTE MANAGEMENT

This section presents a series of exhibits describing the management of RCRA hazardous waste. For a complete description of what is included in this report, please see the Executive Summary sections "RCRA Hazardous Waste" and "RCRA Hazardous Waste Management."

Nationwide, a total of 1,787 facilities reported that they managed 277 million tons of hazardous waste in treatment, storage, or disposal (TSD) units subject to RCRA permitting standards. Storage facilities account for 1,032 of these facilities, leaving 755 facilities that treated or disposed of 277 million tons of hazardous waste. This represents a 797 facility decrease in the total number of TSDs from 1993, and a 42 million ton increase from 1993 quantities.

Exhibits 2.1, 2.2, and 2.3 present the quantity of RCRA hazardous waste managed and the number of TSDs in each EPA Region[1] in 1995. TSDs located in three (3) Regions accounted for 88% of the national total for waste management. These three (3) Regions were Region 6 (180 million tons), Region 4 (42 million tons), and Region 5 (20 million tons).

The EPA Regions where the largest amount of hazardous waste was managed also had the largest number of TSDs. The three (3) Regions with the largest number of TSDs were Region 5 (409 TSDs), Region 4 (335 TSDs), and Region 6 (236 TSDs). Collectively the TSDs in these three (3) Regions accounted for 55% of the total number of TSDs nationwide.

In summary, the TSDs in Region 6 managed the largest amount of waste (180 million tons, or 65% of the national total), while the Region ranked third in the number of TSDs (236). Region 5 had the highest number of TSDs (409), and the TSDs in Region 5 ranked third in the amount of waste managed (20 million tons, or 7% of the national total). Region 10 had the fewest number of TSDs (33), and the TSDs in Region 1 managed the least waste (195 thousand tons).

[1]See Appendix C for information on which States are in each EPA Region.

[1]Quantity managed only by storage is excluded.

Note: Columns may not sum due to rounding.

Exhibits 2.4, 2.5, and 2.6 present the quantity of RCRA hazardous waste managed and the number of TSDs in each State. The four (4) States with the largest amount of hazardous waste generation were also the four (4) States with the largest amount of hazardous waste management. TSDs in Texas managed the largest amount of waste (165 million tons), followed by Tennessee (39 million tons), California (16 million tons), Louisiana (14 million tons), and Michigan (14 million tons). Together the TSDs in these States accounted for 89% of the national management total.

California reported the most TSDs (137), followed by Michigan (107), Illinois (106), Texas (80), and Indiana (75). Together these States accounted for 28% of the total number of TSDs. There were no facilities in the District of Columbia, Guam, New Hampshire, and the Trust Territories that reported treating or disposing waste in units subject to RCRA permitting standards, although these States did have facilities that reported operating permitted storage facilities. There were no facilities in the Navajo Nation and Washington that reported treating, disposing, or storing waste in units subject to RCRA permitting standards.

Exhibit 2.7 presents the 50 largest RCRA hazardous waste management facilities in the United States. Together, these TSDs accounted for more than 93% of the national management total. DuPont - Sabine River Works in Orange, TX, which was the largest generator, was also the largest TSD (managing 58 million tons of waste), followed by Tennessee Eastman in Kingsport, TN (38 million tons) and Amoco Petroleum Products in Texas City, TX (18 million tons).

Large TSDs within the four (4) largest States (Texas, Tennessee, California, and Louisiana) accounted for the majority of the States' management totals. A total of 23 of the 50 largest TSDs were in Texas. These 23 TSDs accounted for 98% of Texas' total hazardous waste management. One (1) Tennessee TSD, Tennessee Eastman Co., accounted for 99% of Tennessee's total. Three (3) California TSDs accounted for 85% of the State's total. In Louisiana, six (6) TSDs accounted for 85% of the State's total.

Nationwide, wastewater management accounted for 97% of the national management total, while in 1993 wastewater management accounted for 94% of the

national management total.[1] Exhibit 2.8 presents the quantities of non-wastewater and wastewater management and their respective percentages, by State. The five (5) States whose TSDs managed the largest amount of hazardous wastewater were Texas (163 million tons), Tennessee (38 million tons), California (16 million tons), Louisiana (14 million tons), and Michigan (13 million tons). The five (5) States whose TSDs managed the largest amount of hazardous non-wastewater were Texas (1.8 million tons), Indiana (690 thousand tons), Michigan (600 thousand tons), Idaho (540 thousand tons), and Louisiana (520 thousand tons).

Most of the waste managed nationally is wastewater, and most of the wastewater is managed by a relatively small number of TSDs. Exhibit 2.9 shows the 50 largest wastewater managers in the United States. Many of the TSDs in Exhibit 2.9 are also listed in Exhibit 2.7. The wastewater managed by the 50 largest wastewater managers (256 million tons) accounted for 95% of the national total for wastewater management and 92% of the total national hazardous waste management.

Overall, total hazardous waste management increased from 235 million tons in 1993 to 277 million tons in 1995. Wastewater management also increased from 220 million tons in 1993 to 270 million tons in 1995. In contrast, non-wastewater management decreased from 14 million tons in 1993 to 7.8 million tons in 1995.

[1] A waste is considered wastewater if the BRS form code is B101, B102, B105, or B110-116, or the BRS system type code is M071-079, M081-085, M089, M091-094, M099, M121-125, M129, or M134-136. See Appendix A for further information on BRS System Type Codes and Appendix B for further information on BRS Form Codes.

Note: Columns may not sum due to rounding.

Exhibits 2.10, 2.11, and 2.12 present the quantity of RCRA hazardous waste managed by various management methods. The majority (53%) of the waste managed in the nation was managed in aqueous treatment units. Aqueous treatment units consist of:

Aqueous organic treatment units	114 million tons
Aqueous organic and inorganic treatment units	24 million tons
Aqueous inorganic treatment units	8 million tons

Land disposal accounted for 8.1% of the national management total. Land Disposal units include:

Deepwell/Underground Injection	21 million tons
Landfill	1 million tons
Surface Impoundment	575 thousand tons
Land Treatment/Application/Farming	10 thousand tons

Thermal treatment accounted for 2.1% of the national management total. Thermal treatment units are:

Incineration	4 million tons
Energy Recovery (Reuse as Fuel)	1 million tons

Recovery operations accounted for 0.7% of the national management total. Recovery operations include:

Fuel Blending	657 thousand tons
Metals Recovery (for Reuse)	528 thousand tons
Other Recovery	515 thousand tons
Solvents Recovery	285 thousand tons

The remaining management quantities (36.1%) were from "Other" treatment and disposal units:

Other Treatment	97 million tons
Other Disposal (specified in comments)	2 million tons
Stabilization	830 thousand tons
Sludge treatment	591 thousand tons

Exhibit 2.10 Quantity of RCRA Hazardous Waste Managed, by Management Method, 1995

MANAGEMENT METHOD	SYSTEM TYPE CODE	TONS MANAGED[1]	PERCENTAGE OF QUANTITY	NUMBER OF FACILITIES[2,3]	PERCENTAGE OF FACILITIES[3]

Note: Columns may not sum due to rounding.

Exhibits 2.13, 2.14, and 2.15 present the quantity of RCRA hazardous waste managed in various treatment and disposal units, limited to waste received from off-site in 1995. For wastes received from off-site, the predominant management methods were incineration, energy recovery, landfill, and underground injection. The national total for hazardous waste received from off-site and managed in treatment and disposal units was 5.7 million tons. This is 2% of the national management total.

Thermal treatment accounted for 26% of the national management total for waste received from off-site and managed on-site. Thermal treatment units are:

Incineration	791 thousand tons
Energy Recovery (Reuse as Fuel)	682 thousand tons

Land disposal accounted for 23.7% of the national management total for waste received from off-site and managed on-site. Land Disposal units include:

Landfill	676 thousand tons
Deepwell/underground Injection	665 thousand tons

Recovery operations accounted for 21.3% of the national management total for waste received from off-site and managed on-site. Recovery operations include:

Fuel Blending	577 thousand tons
Metals Recovery (for Reuse)	353 thousand tons
Solvents Recovery	220 thousand tons
Other Recovery	58 thousand tons

Aqueous treatment accounted for 13.1% of the national management total for waste received from off-site and managed on-site. Aqueous treatment units consist of:

Aqueous inorganic treatment units	562 thousand tons
Aqueous organic treatment units	144 thousand tons
Aqueous organic and inorganic treatment units	39 thousand tons

The remaining management quantities (15.8%) for waste received from off-site and managed on-site were from "Other" treatment and disposal units:

Stabilization	641 thousand tons
Other Treatment	238 thousand tons
Other Disposal (specified in comments)	16 thousand tons
Sludge treatment	2 thousand tons

A comparison between the management profile for all wastes and those received from off-site shows that wastes managed off-site are managed differently. Most wastes managed on site were managed by aqueous treatment. Wastes received from off-site were managed by thermal treatment, land disposal, or recovery.

3.0 SHIPMENTS AND RECEIPTS

This section presents a series of exhibits describing RCRA hazardous waste shipments and receipts in 1995. For a complete description of what is included in this report, please see the Executive Summary sections "RCRA Hazardous Waste" and "RCRA Hazardous Waste Shipments and Receipts."

In 1995, 19,567 shippers[1] reported shipping 16 million tons of RCRA hazardous waste. This is a decrease of 4,397 shippers and a decrease of 2 million tons of hazardous waste compared to 1993. Exhibits 3.1, 3.2, and 3.3 present the quantity of waste shipped and the number of shippers in each EPA Region.[2] Shippers located in Region 5 reported shipping the largest amount of waste (5.8 million tons). Region 5 also reported the largest number of shippers (4,513). Shippers located in Region 8 reported shipping the least amount of waste (136 thousand tons). Region 8 also reported the smallest number of shippers (348).

Nationwide, 522 RCRA treatment, storage, or disposal facilities (TSD) reported receiving 6.2 million tons of waste in 1995. This is a decrease of 217 TSDs and a decrease of 2.8 million tons of hazardous waste compared with 1993. Exhibits 3.4, 3.5, and 3.6 present the quantity of waste received and the number of TSDs that received waste in each EPA Region. Receivers in Region 5 reported receiving the largest quantity of waste (1.9 million tons), and Region 4 reported the largest number of receivers (111). Receivers in Region 8 reported receiving the least amount of waste (66 thousand tons), and Region 10 reported the smallest number of receivers (7).

[1]The term "shipment" is intended to refer to the physical transfer of waste from one facility to another. In some cases, however, shipments occur between facilities that neighbor each other and are under the same corporate name. In these instances, EPA may have assigned unique EPA ID numbers to separate industrial sites within the same plant. The resulting shipments may merely be movement of wastes from one portion of the plant to another.

[2]See Appendix C for information on which States are in each EPA Region.

Exhibit 3.1 **Number and Percentage of Hazardous Waste Shippers and Total RCRA Hazardous Waste Quantity Shipped, by EPA Region, 1995**

2	35	6.7	269,508	4.4
8	27	5.2	65,741	1.1
7	16	3.1	268,082	4.4
10	7	1.3	164,567	2.7
TOTAL	**522**	**100.0**	**6,157,189**	**100.0**

Note: Columns may not sum due to rounding.

Exhibits 3.7, 3.8, and 3.9 present the quantity of waste shipped and the number of shippers in each State. Shippers in Texas reported shipping the largest quantity of waste (2.4 million tons), and New York reported the largest number of shippers (1,785). Shippers in the Navajo Nation reported shipping the least amount of waste (185 tons), while the Virgin Islands reported the fewest number of shippers (1).

Exhibits 3.10, 3.11, and 3.12 present the quantity of waste received and the number of TSDs receiving waste in each State. TSDs in Texas reported receiving the largest quantity of waste (982 thousand tons) while California reported the highest number of TSDs receiving waste (40). Seven (7) States reported they did not have any TSDs that received hazardous waste. The States were the District of Columbia, Navajo Nation, New Hampshire, Trust Territories, Virgin Islands, Washington, and Wyoming.

Exhibits presenting the amount of waste shipped (3.1, 3.2, 3.3, 3.7, 3.8, and 3.9) and exhibits presenting the amount of waste received (3.4, 3.5, 3.6, 3.10, 3.11, and 3.12) show a 9.5 million ton difference between the amount of waste reported shipped and the amount of waste reported received. See the Executive Summary section "RCRA Hazardous Waste Shipments and Receipts" for a discussion of possible reasons for the discrepancy between the amount of waste reported shipped and the amount of waste reported received.

Exhibits 3.13 and 3.14 present listings of the 50 largest shippers and receivers, respectively, in the nation. The largest 50 shippers account for 63% of the national total of waste shipped, and the 50 largest receivers account for 70% of the national total of waste received.

4.0 IMPORTS AND EXPORTS

Exhibits 4.1 and 4.2 present RCRA hazardous waste imports and exports, by EPA Region[1] and by State, respectively, in 1995. For a complete description of what is included in this report, please see the Executive Summary sections "RCRA Hazardous Waste" and "RCRA Hazardous Waste Shipments and Receipts." Only those quantities of waste that enter or leave the State are counted in this category.

In 1995, 3.4 million tons of RCRA hazardous waste were imported from other States. This is a decrease of 820 thousand tons compared with 1993. Receivers located in Region 6 reported importing the largest quantity of waste (1.2 million tons) and shippers located in Region 5 reported exporting the largest quantity of waste (4.6 million tons). Receivers located in Region 8 reported importing the smallest quantity of waste (59 thousand tons). Shippers located in Region 8 also reported exporting the smallest quantity of waste (100 thousand tons).

The five (5) States whose TSDs reported importing the most hazardous waste were Texas (630 thousand tons), Indiana (260 thousand tons), Michigan (260 thousand tons), Pennsylvania (220 thousand tons), and Louisiana (210 thousand tons). Together the TSDs in these States accounted for 46% of the national total of waste imports. Ten (10) States reported they did not have any TSDs that imported waste in 1995. The States are Alaska, the District of Columbia, Guam, Montana, Navajo Nation, New Hampshire, Trust Territories, Virgin Islands, Washington, and Wyoming.

Overall in 1995, 8.9 million tons of RCRA hazardous waste were exported to other States. This is a 2.2 million ton increase compared with 1993. The States whose shippers reported exporting the most hazardous waste were Minnesota (2.1 million tons), Illinois (1.7 million tons), and California (1.2 million tons). Together the shippers in these three (3) States accounted for 57% of the national total of hazardous waste exports.

[1] See Appendix C for information on which States are in each EPA Region.

APPENDIX A

BRS SYSTEM TYPE CODES

This page intentionally left blank.

BRS SYSTEM TYPE CODES

Code	System type
METALS RECOVERY (FOR REUSE)	
M011	High temperature metals recovery
M012	Retorting
M013	Secondary smelting
M014	Other metals recovery for reuse: e.g., ion exchange, reverse osmosis, acid leaching, etc. (Specify in Comments)
M019	Metals recovery - type unknown
SOLVENTS RECOVERY	
M021	Fractionation/distillation
M022	Thin film evaporation
M023	Solvent extraction
M024	Other solvent recovery (Specify in Comments)
M029	Solvents recovery - type unknown
OTHER RECOVERY	
M031	Acid regeneration
M032	Other recovery: e.g., waste oil recovery, nonsolvent organics recovery, etc. (Specify in Comments)
M039	Other recovery - type unknown
INCINERATION	
M041	Incineration - liquids
M042	Incineration - sludges
M043	Incineration - solids
M044	Incineration - gases
M049	Incineration - type unknown
ENERGY RECOVERY (REUSE AS FUEL)	
M051	Energy recovery - liquids
M052	Energy recovery - sludges
M053	Energy recovery - solids
M059	Energy recovery - type unknown
FUEL BLENDING	
M061	Fuel blending

Code	System type
AQUEOUS INORGANIC TREATMENT	
M071	Chrome reduction followed by chemical precipitation
M072	Cyanide destruction followed by chemical precipitation
M073	Cyanide destruction only
M074	Chemical oxidation followed by chemical precipitation
M075	Chemical oxidation only
M076	Wet air oxidation
M077	Chemical precipitation
M078	Other aqueous inorganic treatment: e.g., ion exchange, reverse osmosis, etc. (Specify in Comments)
M079	Aqueous inorganic treatment - type unknown
AQUEOUS ORGANIC TREATMENT	
M081	Biological treatment
M082	Carbon adsorption
M083	Air/steam stripping
M084	Wet air oxidation
M085	Other aqueous organic treatment (Specify in Comments)
M089	Aqueous organic treatment - type unknown
AQUEOUS ORGANIC AND INORGANIC TREATMENT	
M091	Chemical precipitation in combination with biological treatment
M092	Chemical precipitation in combination with carbon adsorption
M093	Wet air oxidation
M094	Other organic/inorganic treatment (Specify in Comments)
M099	Aqueous organic and inorganic treatment - type unknown
SLUDGE TREATMENT	
M101	Sludge dewatering
M102	Addition of excess lime
M103	Absorption/adsorption
M104	Solvent extraction
M109	Sludge treatment - type unknown

BRS SYSTEM TYPE CODES

(Continued)

Code	System type
	STABILIZATION
M111	Stabilization/Chemical fixation using cementitious and/or pozzolanic materials
M112	Other stabilization (Specify in Comments)
M119	Stabilization - type unknown
	OTHER TREATMENT
M121	Neutralization only
M122	Evaporation only
M123	Settling/clarification only
M124	Phase separation (e.g., emulsion breaking, filtration) only
M125	Other treatment (Specify in Comments)
M129	Other treatment - type unknown
	DISPOSAL
M131	Land treatment/application/farming
M132	Landfill
M133	Surface impoundment (to be closed as a landfill)
M134	Deepwell/underground injection
M135	Direct discharge to sewer/POTW (no prior treatment)
M136	Direct discharge to surface water under NPDES (no prior treatment)
M137	Other disposal (Specify in Comments)
	TRANSFER FACILITY STORAGE
M141	Transfer facility storage, waste was shipped off site with no on-site TDR activity

APPENDIX B

BRS FORM CODES

This page intentionally left blank.

BRS FORM CODES

Code	System type

LAB PACKS

LAB PACKS - Lab packs of mixed wastes, chemicals, lab wastes

B001	Lab packs of old chemicals only
B002	Lab packs of debris only
B003	Mixed lab packs
B004	Lab packs containing acute hazardous wastes
B009	Other lab packs (Specify in Comments)

LIQUIDS

INORGANIC LIQUIDS - Waste that is primarily inorganic and highly fluid (e.g., aqueous), with low suspended inorganic solids and low organic content

B101	Aqueous waste with low solvents
B102	Aqueous waste with low other toxic organics
B103	Spent acid with metals
B104	Spent acid without metals
B105	Acidic aqueous waste
B106	Caustic solution with metals but no cyanides
B107	Caustic solution with metals and cyanides
B108	Caustic solution with cyanides but no metals
B109	Spent caustic
B110	Caustic aqueous waste
B111	Aqueous waste with reactive sulfides
B112	Aqueous waste with other reactives (e.g., explosives)
B113	Other aqueous waste with high dissolved solids
B114	Other aqueous waste with low dissolved solids
B115	Scrubber water
B116	Leachate
B117	Waste liquid mercury
B119	Other inorganic liquids (Specify in Comments)

ORGANIC LIQUIDS - Waste that is primarily organic and is highly fluid, with low inorganic solids content and low-to-moderate water content

B201	Concentrated solvent-water solution
B202	Halogenated (e.g., chlorinated) solvent
B203	Nonhalogenated solvent
B204	Halogenated/nonhalogenated solvent mixture
B205	Oil-water emulsion or mixture
B206	Waste oil
B207	Concentrated aqueous solution of other organics
B208	Concentrated phenolics
B209	Organic paint, ink, lacquer, or varnish
B210	Adhesives or epoxies
B211	Paint thinner or petroleum distillates
B212	Reactive or polymerizable organic liquid
B219	Other organic liquids (Specify in Comments)

SOLIDS

INORGANIC SOLIDS - Waste that is primarily inorganic and solid, with low organic content and low-to-moderate water content; not pumpable

B301	Soil contaminated with organics
B302	Soil contaminated with inorganics only
B303	Ash, slag, or other residue from incineration of wastes
B304	Other "dry" ash, slag, or thermal residue
B305	"Dry" lime or metal hydroxide solids chemically "fixed"
B306	"Dry" lime or metal hydroxide solids not "fixed"
B307	Metal scale, filings, or scrap
B308	Empty or crushed metal drums or containers
B309	Batteries or battery parts, casings, cores
B310	Spent solid filters or adsorbents
B311	Asbestos solids and debris
B312	Metal-cyanide salts/chemicals
B313	Reactive cyanide salts/chemicals
B314	Reactive sulfide salts/chemicals
B315	Other reactive salts/chemicals
B316	Other metal salts/chemicals
B319	Other waste inorganic solids (Specify in Comments)

ORGANIC SOLIDS - Waste that is primarily organic and solid, with low-to-moderate inorganic content and water content; not pumpable

B401	Halogenated pesticide solid
B402	Nonhalogenated pesticide solid
B403	Solid resins or polymerized organics
B404	Spent carbon
B405	Reactive organic solid
B406	Empty fiber or plastic containers

Code	System type
B407	Other halogenated organic solids (Specify in Comments)
B409	Other nonhalogenated organic solids (Specify in Comments)

SLUDGES

INORGANIC SLUDGES - Waste that is primarily inorganic, with moderate-to-high water content and low organic content, and pumpable

B501	Lime sludge without metals
B502	Lime sludge with metals/metal hydroxide sludge
B503	Wastewater treatment sludge with toxic organics
B504	Other wastewater treatment sludge
B505	Untreated plating sludge without cyanides
B506	Untreated plating sludge with cyanides
B507	Other sludge with cyanides
B508	Sludge with reactive sulfides
B509	Sludge with other reactives
B510	Degreasing sludge with metal scale or filings
B511	Air pollution control device sludge (e.g., fly ash, wet scrubber sludge)
B512	Sediment or lagoon dragout contaminated with organics
B513	Sediment or lagoon dragout contaminated with inorganics only
B514	Drilling mud
B515	Asbestos slurry or sludge
B516	Chloride or other brine sludge
B519	Other inorganic sludges (Specify in Comments)

ORGANIC SLUDGES - Waste that is primarily organic with low-to-moderate inorganic solids content and water content, and pumpable

B601	Still bottoms of halogenated (e.g., chlorinated) solvents or other organic liquids
B602	Still bottoms of nonhalogenated solvents or other organic liquids
B603	Oily sludge
B604	Organic paint or ink sludge
B605	Reactive or polymerizable organics
B606	Resins, tars, or tarry sludge
B607	Biological treatment sludge
B608	Sewage or other untreated biological sludge
B609	Other organic sludges (Specify in Comments)

GASES

INORGANIC GASES - Waste that is primarily inorganic with a low organic content and is a gas at atmospheric pressure

B701	Inorganic gases

ORGANIC GASES - Waste that is primarily organic with low-to-moderate inorganic content and is a gas at atmospheric pressure

B801	Organic gases

EPA HAZARDOUS WASTE CODES

This page intentionally left blank.

EPA HAZARDOUS WASTE CODES

Code	Waste description
CHARACTERISTICS OF HAZARDOUS WASTE	
D001	Ignitable waste
D002	Corrosive waste
D003	Reactive waste
D004	Arsenic
D005	Barium
D006	Cadmium
D007	Chromium
D008	Lead
D009	Mercury
D010	Selenium
D011	Silver
D012	Endrin(1,2,3,4,10,10-hexachloro-1,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4-endo, endo-5,8-dimeth-ano-naphthalene)
D013	Lindane (1,2,3,4,5,6-hexa-chlorocyclohexane, gamma isomer)
D014	Methoxychlor (1,1,1-trichloro-2,2-bis [p-methoxyphenyl] ethane)
D015	Toxaphene (C_{10} H_{10} Cl_8, Technical chlorinated camphene, 67-69 percent chlorine)
D016	2,4-D (2,4-Dichlorophenoxyacetic acid)
D017	2,4,5-TP Silvex (2,4,5-Trichlorophenoxypropionic acid)
D018	Benzene
D019	Carbon tetrachloride
D020	Chlordane
D021	Chlorobenzene
D022	Chloroform
D023	o-Cresol
D024	m-Cresol
D025	p-Cresol
D026	Cresol
D027	1,4-Dichlorobenzene
D028	1,2-Dichloroethane
D029	1,1-Dichloroethylene
D030	2,4-Dinitrotoluene
D031	Heptachlor (and its epoxide)
D032	Hexachlorobenzene
D033	Hexachlorobutadiene
D034	Hexachloroethane
D035	Methyl ethyl ketone
D036	Nitrobenzene
D037	Pentachlorophenol
D038	Pyridine
D039	Tetrachloroethylene
D040	Trichlorethylene
D041	2,4,5-Trichlorophenol
D042	2,4,6-Trichlorophenol
D043	Vinyl chloride

EPA HAZARDOUS WASTE CODES

(Continued)

Code	Waste description
HAZARDOUS WASTE FROM NONSPECIFIC SOURCES	
F001	The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichlorethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F002	The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2, trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F001, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F003	The following spent non-halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/ blends containing, before use, only the above spent nonhalogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above nonhalogenated solvents, and a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F004	The following spent nonhalogenated solvents: cresols, cresylic acid, and nitrobenzene; and the still bottoms from the recovery of these solvents; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above nonhalogenated solvents or those solvents listed in F001, F002, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F005	The following spent nonhalogenated solvents: toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above nonhalogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F006	Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc, and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.
F007	Spent cyanide plating bath solutions from electroplating operations.
F008	Plating bath residues from the bottom of plating baths from electroplating operations in which cyanides are used in the process.
F009	Spent stripping and cleaning bath solutions from electroplating operations in which cyanides are used in the process.

Code	Waste description
F010	Quenching bath residues from oil baths from metal heat treating operations in which cyanides are used in the process.
F011	Spent cyanide solutions from slat bath pot cleaning from metal heat treating operations.
F012	Quenching wastewater treatment sludges from metal heat treating operations in which cyanides are used in the process.
F019	Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusive conversion coating process.
F020	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- or tetrachlorophenol or of intermediates used to produce their pesticide derivatives. (This listing does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.)
F021	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of pentachlorophenol, or of intermediates used to produce derivatives.
F022	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzenes under alkaline conditions.
F023	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- and tetrachlorophenols. (This listing does not include wastes from equipment used only for the production or use of hexachlorophene from highly purified 2,4,5-trichlorophenol.)
F024	Process wastes including, but not limited to, distillation residues, heavy ends, tars, and reactor clean-out wastes, from the production of certain chlorinated aliphatic hydrocarbons by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution. (This listing does not include wastewaters, wastewater treatment sludge, spent catalysts, and wastes listed in Sections 261.31. or 261.32)
F025	Condensed light ends, spent filters and filter aids, and spent desiccant wastes from the production of certain chlorinated aliphatic hydrocarbons, by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one, to and including five, with varying amounts and positions of chlorine substitution.
F026	Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzene under alkaline conditions.

EPA HAZARDOUS WASTE CODES

(Continued)

Code	Waste description
F027	Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing hexachlorophene synthesized from prepurified 2,4,5-trichlorophenol as the sole component.)
F028	Residues resulting from the incineration or thermal treatment of soil contaminated with EPA hazardous waste nos. F020, F021, F022, F023, F026, and F027.
F032	Wastewaters, process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use, or have previously used, chlorophenolic formulations [except potentially cross-contaminated wastes that have had the F032 waste code deleted in accordance with Section 261.35 (i.e., the newly promulgated equipment cleaning or replacement standards), and where the generator does not resume or initiate use of chlorophenolic formulations]. (This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.)
F034	Wastewaters, process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use creosote formulations. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.
F035	Wastewaters, process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chromium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.
F037	Petroleum refinery primary oil/water/solids separation sludge - Any sludge generated from the gravitational separation of oil/water/solids during the storage or treatment of process wastewaters and oily cooling wastewaters from petroleum refineries. Such sludges include, but are not limited to, those generated in oil/water/solids separators; tanks and impoundments; ditches and other conveyances; sumps; and storm water units receiving dry weather flow. Sludges generated in storm water units that do not receive dry weather flow, sludges generated in aggressive biological treatment units as defined in Section 261.31(b)(2)(including sludges generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units), and K051 wastes are exempted from this listing.

Code	Waste description
F038	Petroleum refinery secondary (emulsified) oil/water/solids separation sludge - Any sludge and/or float generated from the physical and/or chemical separation of oil/water/solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in induced air flotation (IAF) units, tanks and impoundments, and all sludges generated in DAF units. Sludges generated in stormwater units that do not receive dry weather flow, sludges generated in aggressive biological treatment units as defined in Section 261.31(b)(2) (including sludges generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units), and F037, K048, and K051 wastes are exempted from this listing.
F039	Leachate resulting from the treatment, storage, or disposal of wastes classified by more than one waste code under Subpart D, or from a mixture of wastes classified under Subparts C and D of this part. (Leachate resulting from the management of one or more of the following EPA Hazardous Wastes and no other hazardous wastes retains its hazardous waste code(s): F020, F021, F022, F023, F026, F027, and/or F028.)
HAZARDOUS WASTE FROM SPECIFIC SOURCES	
K001	Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and/or pentachlorophenol.
K002	Wastewater treatment sludge from the production of chrome yellow and orange pigments.
K003	Wastewater treatment sludge from the production of molybdate orange pigments.
K004	Wastewater treatment sludge from the production of zinc yellow pigments.
K005	Wastewater treatment sludge from the production of chrome green pigments.
K006	Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).
K007	Wastewater treatment sludge from the production of iron blue pigments.
K008	Oven residue from the production of chrome oxide green pigments.
K009	Distillation bottoms from the production of acetaldehyde from ethylene.
K010	Distillation side cuts from the production of acetaldehyde from ethylene.
K011	Bottom stream from the wastewater stripper in the production of acrylonitrile.
K013	Bottom stream from the acetonitrile column in the production of acrylonitrile.
K014	Bottoms from the acetonitrile purification column in the production of acrylonitrile.
K015	Still bottoms from the distillation of benzyl chloride.
K016	Heavy ends or distillation residues from the production of carbon tetrachloride.
K017	Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.
K018	Heavy ends from the fractionation column in ethyl chloride production.
K019	Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.

EPA HAZARDOUS WASTE CODES

(Continued)

Code	Waste description
K020	Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.
K021	Aqueous spent antimony catalyst waste from fluoromethane production.
K022	Distillation bottom tars from the production of phenol/acetone from cumene.
K023	Distillation light ends from the production of phthalic anhydride from naphthalene.
K024	Distillation bottoms from the production of phthalic anhydride from naphthalene.
K025	Distillation bottoms from the production of nitrobenzene by the nitration of benzene.
K026	Stripping still tails from the production of methyl ethyl pyridines.
K027	Centrifuge and distillation residues from toluene diisocyanate production.
K028	Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.
K029	Waste from the product steam stripper in the production of 1,1,1-trichloroethane.
K030	Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.
K031	By-product salts generated in the production of MSMA and cacodylic acid.
K032	Wastewater treatment sludge from the production of chlordane.
K033	Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane.
K034	Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane.
K035	Wastewater treatment sludges generated in the production of creosote.
K036	Still bottoms from toluene reclamation distillation in the production of disulfoton.
K037	Wastewater treatment sludges from the production of disulfoton.
K038	Wastewater from the washing and stripping of phorate production.
K039	Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.
K040	Wastewater treatment sludge from the production of phorate.
K041	Wastewater treatment sludge from the production of toxaphene.
K042	Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T.
K043	2,6-dichlorophenol waste from the production of 2,4-D.
K044	Wastewater treatment sludges from the manufacturing and processing of explosives.
K045	Spent carbon from the treatment of wastewater containing explosives.
K046	Wastewater treatment sludges from the manufacturing, formulation, and loading of lead-based initiating compounds.
K047	Pink/red water from TNT operations.
K048	Dissolved air flotation (DAF) float from the petroleum refining industry.

Code	Waste description
K049	Slop oil emulsion solids from the petroleum refining industry.
K050	Heat exchanger bundle cleaning sludge from the petroleum refining industry.
K051	API separator sludge from the petroleum refining industry.
K052	Tank bottoms (leaded) from the petroleum refining industry.
K060	Ammonia still lime sludge from coking operations.
K061	Emission control dust/sludge from the primary production of steel in electric furnaces.
K062	Spent pickle liquor from steel finishing operations of plants that produce iron or steel.
K064	Acid plant blowdown slurry/sludge resulting from the thickening of blowdown slurry from primary copper production.
K065	Surface impoundment solids contained in and dredged from surface impoundments at primary lead smelting facilities.
K066	Sludge from treatment of process wastewater and/or acid plant blowdown from primary zinc production.
K069	Emission control dust/sludge from secondary lead smelting.
K071	Brine purification muds from the mercury cell process in chlorine production, in which separately prepurified brine is not used.
K073	Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.
K083	Distillation bottoms from aniline production.
K084	Wastewater treatment sludges generated during the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.
K085	Distillation or fractionation column bottoms from the production of chlorobenzenes.
K086	Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, driers, soaps, and stabilizers containing chromium and lead.
K087	Decanter tank tar sludge from coking operations.
K088	Spent potliners from primary aluminum reduction.
K090	Emission control dust or sludge from ferrochromiumsilicon production.
K091	Emission control dust or sludge from ferrochromium production.
K093	Distillation light ends from the production of phthalic anhydride from ortho-xylene.
K094	Distillation bottoms from the production of phthalic anhydride from ortho-xylene.
K095	Distillation bottoms from the production of 1,1,1-trichloroethane.
K096	Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.
K097	Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.

EPA HAZARDOUS WASTE CODES

(Continued)

Code	Waste description
K098	Untreated process wastewater from the production of toxaphene.
K099	Untreated wastewater from the production of 2,4-D.
K100	Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting.
K101	Distillation tar residues from the distillation of aniline-based compounds in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.
K102	Residue from the use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.
K103	Process residues from aniline extraction from the production of aniline.
K104	Combined wastewaters generated from nitrobenzene/aniline production.
K105	Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.
K106	Wastewater treatment sludge from the mercury cell process in chlorine production.
K107	Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.
K108	Condensed column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine from carboxylic acid hydrazides.
K109	Spent filter cartridges from product purification from the product of 1,1-dimethylhydrazine from carboxylic acid hydrazides.
K110	Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine from carboxylic acid hydrazides.
K111	Product washwaters from the production of dinitrotoluene via nitration of toluene.
K112	Reaction by-product water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.
K113	Condensed liquid light ends from purification of toluenediamine in production of toluenediamine via hydrogenation of dinitrotoluene.
K114	Vicinals from the purification of toluenediamine in production of toluenediamine via hydrogenation of dinitrotoluene.
K115	Heavy ends from purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.
K116	Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.
K117	Wastewater from the reactor vent gas scrubber in the production of ethylene dibromide via bromination of ethene.
K118	Spent adsorbent solids from purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.

Code	Waste description
K123	Process wastewater (including supernates, filtrates, and washwaters) from the production of ethylenebisdithiocarbamic acid and its salts.
K124	Reactor vent scrubber water from the production of ethylenebisdithiocarbamic acid and its salts.
K125	Filtration, evaporation, and centrifugation solids from the production of ethylenebisdithiocarbamic acid and its salts.
K126	Baghouse dust and floor sweepings in milling and packaging operations from production or formulation of ethylenebisdithiocarbamic acid and its salts.
K131	Wastewater from the reactor and spent sulfuric acid from the acid dryer from the production of methyl bromide.
K132	Spent absorbent and wastewater separator solids from the production of methyl bromide.
K136	Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.
K141	Process residues from the recovery of coal tar, including, but not limited to, tar collecting sump residues from the production of coke from coal or the recovery of coke by-products produced from coal. This listing does not include K087 (decanter tank sludge from coking operations).
K142	Tank storage residues from the production of coke from coal or from the recovery of coke by-products from coal.
K143	Process residues from the recovery of light oil, including, but not limited to, those generated in stills, decanters, and wash oil recovery units from the recovery of coke by-products produced from coal.
K144	Wastewater sump residues from light oil refining, including, but not limited to, intercepting or contamination sump sludges from the recovery of coke by-products produced from coal.
K145	Residues from naphthalene collection and recovery operations from the recovery of coke by-products produced from coal.
K147	Tar storage residues from coal tar refining.
K148	Residues from coal tar distillation, including, but not limited to, still bottoms.
K149	Distillation bottoms from the production of alpha (or methyl-) chlorinated tolunes, ring-chlorinated tolunes, benzoyl chlorides, and compounds with mixtures of these functional groups. [This waste does not include still bottoms from the distillation of benzoyl chloride]
K150	Organic residules excluding spent carbon adsorbent, from the spent chlorine gas and hydrochloric acid recovery processes associated with the production of alpha (or methyl-) chlorinated tolunes, benzoyl chlorides, and compounds with mixtures of these functional groups.
K151	Wastewater treatment sludges, excluding neutralization and biological sludges, generated during the treatment of wastewaters from the production of alpha (or methyl-) chlorinated tolunes, benzoyl chlorides, and compounds with mixtures of these functional groups.

EPA HAZARDOUS WASTE CODES

(Continued)

Code	Waste description
K156	Organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes.
K157	Wastewaters (including scrubber waters, condenser waters, washwaters, and separation waters) from the production of carbamates and carbamoyl oximes.
K158	Bag house dusts and filter/separation solids from the production of carbamates and carbamoyl oximes.
K159	Organics from the treatment of thiocarbamate wastes.
K160	Solids (including filter wastes, separation solids, and spent catalysts) from the production of thiocarbamates and solids from the treatment of thiocarbamate wastes.
K161	Purification solids (including filtration, evaporation, and centrifugation solids), bag house dust and floor sweepings from the production of dithiocarbamate acids and their salts. (This listing does not include K125 or K126).
DISCARDED COMMERCIAL CHEMICAL PRODUCTS, OFF-SPECIFICATION SPECIES, CONTAINER RESIDUALS, AND SPILL RESIDUES THEREOF—<u>ACUTE</u> HAZARDOUS WASTE	
(AN ALPHABETIZED LISTING CAN BE FOUND AT 40 CFR 261.33.)	
P001	2H-1-Benzopyran-2-one, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, & salts, when present at concentrations greater than 0.3%
P001	Warfarin, & salts, when present at concentrations greater than 0.3%
P002	1-Acetyl-2-thiourea
P002	Acetamide, N-(aminothioxomethyl)-
P003	2-Propenal
P003	Acrolein
P004	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexa-chloro-1,4,4a,5,8,8a,-hexahydro-, (1alpha, 4alpha, 4abeta, 5alpha, 8alpha, 8abeta)-
P004	Aldrin
P005	2-Propen-1-ol
P005	Allyl alcohol
P006	Aluminum phosphide (R,T)
P007	3(2H)-Isoxazolone, 5-(aminomethyl)-
P007	5-(Aminomethyl)-3-isoxazolol
P008	4-Aminopyridine
P008	4-Pyridinamine
P009	Ammonium picrate (R)
P009	Phenol, 2,4,6-trinitro-, ammonium salt (R)
P010	Arsenic acid H_3AsO_4
P011	Arsenic oxide As_2O_5
P011	Arsenic pentoxide
P012	Arsenic oxide As_2O_3
P012	Arsenic trioxide
P013	Barium cyanide
P014	Benzenethiol
P014	Thiophenol
P015	Beryllium
P016	Dichloromethyl ether
P016	Methane, oxybis[chloro-

APPENDIX E

DATA QUALITY AND COMPLETENESS

This page intentionally left blank.

DATA QUALITY AND COMPLETENESS

The data presented in this report have been provided by States to their respective EPA Regional offices. In some cases the data were also collected by EPA Regional offices. When the data were transmitted to EPA Headquarters, the State or Region that collected the data provided an indication of how complete the data were for each State that was being transmitted. The following exhibit lists the current level of completion for each State according to one of the two categories described below.

1. State believes data submission is complete.

   State has indicated that it provided all required data for all handlers that were required to file the 1995 Biennial Report, including all LQGs and TSDs in the State. (Please note that sites claiming confidential business information have been excluded from all volumes of this preliminary report.)

2. State believes data submission is incomplete.

   State has indicated that its data omitted handlers that were required to file the 1995 Biennial Report. Data for these States will probably change when a complete submission is received for the State.

Exhibit: Status of State Data Submissions, 1995

STATE	STATUS OF STATE DATA SUBMISSION
ALABAMA	STATE BELIEVES DATA SUBMISSION IS COMPLETE.
ALASKA	STATE BELIEVES DATA SUBMISSION IS COMPLETE.
ARIZONA	STATE BELIEVES DATA SUBMISSION IS COMPLETE.
ARKANSAS	STATE BELIEVES DATA SUBMISSION IS COMPLETE.
CALIFORNIA	STATE BELIEVES DATA SUBMISSION IS COMPLETE.
COLORADO	STATE BELIEVES DATA SUBMISSION IS COMPLETE.
